Abstract

[Use this abstract to briefly explain what you are planning to do. Here is an example:] We are planning to use the collection of all papers ever submitted to the ICLR conference to see how well paper acceptance can be predicted from trivial features, such as the paper's overall length, number of words or number of figures. We are planning to use logistic regression for this purpose.

You can find a detailed example and instructions on how to use this style file in the attached neurip_2021.tex file. This includes instructions for how to lay out citations.
